

1 **ABSTRACT**

2 A dialing device is used in company with a cell phone in a vehicle,
3 wherein the driver writes down on a handwriting device a name or a number of a
4 person to be telephoned. After a control unit identifies the written data, the
5 control unit actuates a miniature projector to project an image on a windshield.
6 Therefore, by directly reviewing the windshield, the car driver can easily check
7 whether the name or the number to be dialed is correct without stopping looking
8 at the road ahead.
